PATIENT CARE DIRECTIVE

SECTION	SUB-SECTION
Patient Care Delivery	Non-Urban Patient Transport
DOCUMENT TITLE	
Critical Patient Toboggan Transport Procedure	

DEFINITIONS

- PEAK: PEAK Emergency Response Training (a division of Peak Project Management, Inc.)
Client Abbr.: Insert Client Full Name
PCD: Patient Care Directive
Patrollers: Paid &/or Volunteer patrol staff

RECITALS

1. The vast majority of toboggans used to transport patients in/from the non-urban environment are designed as single-occupant devices.
2. Toboggans currently in operation at Insert Abbr. are single-occupant devices.
3. PEAK and Insert Abbr. are responsible for the content, revision and review of this document.

PURPOSE

1. This PCD is applicable to both Paid and Volunteer Patrols operating at Insert Abbr.
2. This PCD is to provide guidance to Patrollers for transport of critical patients in/from the non-urban environment utilizing a single-occupant toboggan device.

PROCEDURE

1. Critical patients requiring toboggan transport at Insert Abbr. will be transported by all patrollers in the 'Supine/Lateral, Head-Up-Hill Position' whenever possible.
2. In rare circumstances transportation of patients in the 'Supine/Lateral, Head-Up-Hill Position' may not be feasible due to terrain and toboggan placement at the scene. In these circumstances, the Lead Patroller will document the rationale for patient transport in the non- 'Supine/Lateral, Head-Up-Hill Position' on a PEAK Incident Report.
